WORK EXPERIENCE

Youth Innovation Lab, Baluwatar

Nov 2024 - Present

- **Project Officer,** *stationed at* **NDRRMA, Ministry of Home Affairs (MoHA):**
  July 2026 - Present
  - Lead planning and implementation of national disaster management digital platforms and technology projects.
  - Manage project scope, timelines, deliverables, risks, dependencies, testing, deployment, and system upgrades.
  - Coordinate developers, government agencies, partner organizations, technical experts, and system users.
  - Facilitate requirement gathering, stakeholder consultations, progress reviews, and technical decision-making.
  - Oversee repositories, version control, technical documentation, release planning, and code governance.
  - Prepare implementation reports, management updates, and technical documentation.
  - Lead user training, stakeholder engagement, and capacity-building activities for disaster information systems.

- **Project Associate,** *stationed at* **NDRRMA, Ministry of Home Affairs (MoHA):**
  July 2025 - June 2026
  - Supported implementation and enhancement of national disaster management information systems, including the **Bipad Portal**.
  - Coordinated with federal, provincial, and local government stakeholders for requirements, system improvements, and implementation support.
  - Tracked project activities, timelines, system issues, action items, and implementation progress.
  - Supported system testing, deployment, maintenance, issue resolution, change management, and documentation.
  - Organized stakeholder consultations, user training, and capacity-building programs.
  - Contributed to data quality assurance, user support, reporting, and process improvement.

- **Backend Developer**
  Apr 2025 - June 2025
  - Designed and developed RESTful APIs, authentication mechanisms, database schemas, and backend services using **Python** and **Django**.

- Worked with PostgreSQL/SQL databases, migrations, relational data models, and application-level business logic.
- Participated in API integration, code review, debugging, testing, deployment, and release activities.
- Collaborated with frontend developers to translate product and UI requirements into backend APIs and application workflows.
- Contributed to architectural and technical decisions for scalable web-based applications.

Ambirise IT Solution, Pokhara
IT Assistant | Mar 2019 – Aug 2024

- Managed organizational IT infrastructure, including servers, networks, domains, DNS, security, troubleshooting, and technical support.
- Developed and maintained internal applications and digital systems to improve operational efficiency.
- Supported digital operations, system optimization, and coordination with stakeholders for technical solutions.

EDUCATION

School of Engineering, Pokhara University - *Bachelor's in Computer Engineering*
Aug 2019 - Nov 2024

SOS Hermann Gmeiner School, Gandaki - *+2 Science*
July 2016 - July 2018

SOS Hermann Gmeiner School, Gandaki - *SLC*
June 2016

TECHNICAL & PRODUCT SKILLS

Product & Project Management:
Product Requirements, Requirement Analysis, Technical Specifications, Product Enhancement, Backlog Prioritization, Sprint Coordination, Change Management, Release Management, Stakeholder Management, UAT, Gap Analysis

Backend & APIs:
Python, Django, Django REST Framework, RESTful APIs, API Integration, Authentication, Role-Based Access Control

Database:
PostgreSQL, SQL, Database Design, Data Modeling, Database Migration

Development & Version Control:
Git, GitLab, GitHub, Issue Tracking, Code Review, Branching & Release Workflows

Deployment & Systems:
Linux, Server Deployment, Application Configuration, Database Backup, System Monitoring, SMTP, DNS

Frontend / Product Design:
UI/UX Collaboration, Responsive Web Applications, Design Review, User Workflow Analysis

AI-Assisted Development:
Claude Code, OpenAI Codex, ChatGPT, Ollama

PROJECTS

Bipad Portal (National Disaster Information Management System)

- Served as focal person for project coordination, change management, and system oversight.
- Coordinated with NDRRMA, government agencies, and technical teams to gather requirements and prioritize enhancements.
- Conducted gap analysis and translated operational needs into technical specifications and development tasks.
- Managed issues, feature requests, and release coordination through GitLab.
- Supported system monitoring, data quality assurance, documentation, and continuous platform improvement.
- Managed the product enhancement lifecycle from requirement gathering and gap analysis to technical specification, development coordination, testing, and release.
- Maintained and prioritized issues, enhancement requests, development tasks, and releases using GitLab.
- Coordinated technical discussions related to APIs, database workflows, system integrations, authentication, and application improvements.
- Worked as the communication bridge between government stakeholders, technical teams, and management for product decisions and implementation priorities.

NDRRMA Website and Digital Service Systems

- Supported enhancement, maintenance, and continuous improvement of the NDRRMA website and related digital services.
- Conducted system audits, coordinated feature enhancements, and managed the **Appointment Management System**.
- Translated stakeholder requirements into technical updates and change requests.
- Supported testing, deployment, post-release monitoring, troubleshooting, and user support.

Monitor for Disaster Strategic Action Plans (MDSA)

- Coordinated development and enhancement of the MDSA platform for monitoring disaster risk reduction strategic action plans.
- Worked with stakeholders to define indicators, reporting workflows, and monitoring requirements.
- Supported system configuration, user management, data validation, testing, deployment, and user acceptance.

- Facilitated change requests and ensured alignment with national DRR monitoring frameworks.

Volunteer Management System (VMS)

- Supported the design, enhancement, and maintenance of the national Volunteer Management System under NDRRMA.
- Coordinated with stakeholders to improve volunteer registration, deployment, and management workflows.
- Managed user roles, permissions, and volunteer data management processes.
- Assisted in implementing location-based functionalities and volunteer information tracking features.
- Conducted system testing and provided technical support to users and administrators.
- Supported data reporting and analytics functionalities for operational decision-making.

Disaster Risk Assessment Platform: Bipad Assessment Tool (BAT)

- Development and customization of a digital data collection platform (ODK-based) for disaster risk assessments.
- Aligned **application workflows with government-defined survey methodologies and data collection processes.**
- Coordinated deployment and release processes to ensure stable system rollout and operational continuity.

Youth Innovation Lab – Website Backend System

- Developed and managed backend components of web-based information systems, ensuring secure and structured data handling.
- Implemented **role-based access control and authentication mechanisms for secure user management.**
- **Managed database operations** and backend logic to s**upport efficient system functionality and data workflows.**
- Customized administrative interfaces to **enhance system usability and management efficiency.**

Technical Support and System Administration

- Coordinated with developers, government stakeholders, and end users to address technical challenges and system enhancement requests.
- Prepared technical documentation, user guidance materials, and support reports.
- Managed server deployments, application configurations, database backups, and system monitoring activities.
- Configured SMTP and email notification services for automated communication workflows.
